Hotel Room Booking Automation Using n8n

Introduction

This document explains how to create a **Hotel Room Booking Form** using **n8n** and automatically store the submitted booking details in **Google Sheets**.The automation collects booking information from users and records it in a spreadsheet for easy management.

Workflow Overview

The workflow structure is:

On Form Submission
↓
Google Sheets
(Append Row)

When a user submits the booking form, the data is automatically stored in Google Sheets.

Step 1: Create a New Workflow

1. Open your **n8n dashboard**.
2. Click **New Workflow**.
3. Rename the workflow as:

Hotel Room Booking Automation

Step 2: Create the Booking Form

Add the **On Form Submission** node.

Configure the form with the following fields:

Field Name	Field type	Description
Name	Text	Guest name
Room Preference	Dropdown	Room type selection

Example room options:

- Standard Room
- Deluxe Room
- Suite

This form allows guests to select their preferred room type.

Step 3: Add Google Sheets Node

1. Click the **+ button** next to the **On Form Submission** node.
2. Search for **Google Sheets**.
3. Add the **Google Sheets node**.

Set the operation to:

Append Row

This will add a new row each time a booking form is submitted.

Step 4: Connect Google Account

1. In the Google Sheets node, create **New Credentials**.
2. Log in using your **Google account**.
3. Allow n8n to access your Google Sheets.

Step 5: Create the Spreadsheet

Create a spreadsheet in **Google Sheets** with the following columns:

Name	Room Preference

Step 6: Map the Fields

Map the form fields to the spreadsheet columns.

Form Field	Google Sheets Column
Name	Name
Room Preference	Room Preference

Step 7: Save and Publish the Workflow

1. Click **Save**.
2. Click **Publish** in the top right corner.

3. The workflow becomes **Active**.

Once active, the **Production Form URL** will work.

Step 8: Test the Booking Form

Open the form URL and enter booking details.

Example:

Name	Room Preference
Alex	Deluxe Room

Click **Submit**.

Step 9: Verify Data in Google Sheets

After submitting the form, open your spreadsheet.

You will see a new row added automatically.

Example result:

Name	Room Preference
Alex	Deluxe Room

Final Result

The hotel booking automation works as follows:

Guest fills booking form
↓
Form submitted to n8n
↓
n8n processes the data
↓
Booking stored in Google Sheets

Conclusion

Using **n8n**, hotels can automate booking data collection efficiently. This automation ensures all booking information is stored safely in **Google Sheets** without manual entry.
